Directory Guide

Nebraska Water Resources Directory is an effective online tool to direct water users to a list of helpful contacts and resources. The directory allows users to easily search and locate public entities, data sources, and other contacts to address specific inquiries involving water resources.

The directory offers easy to find maps and locations of each public entity, a description of the entity and their responsibilities, and links to the contact information and online resources. The directory was last updated in November of 2016 with the intent of updating the document as needed.

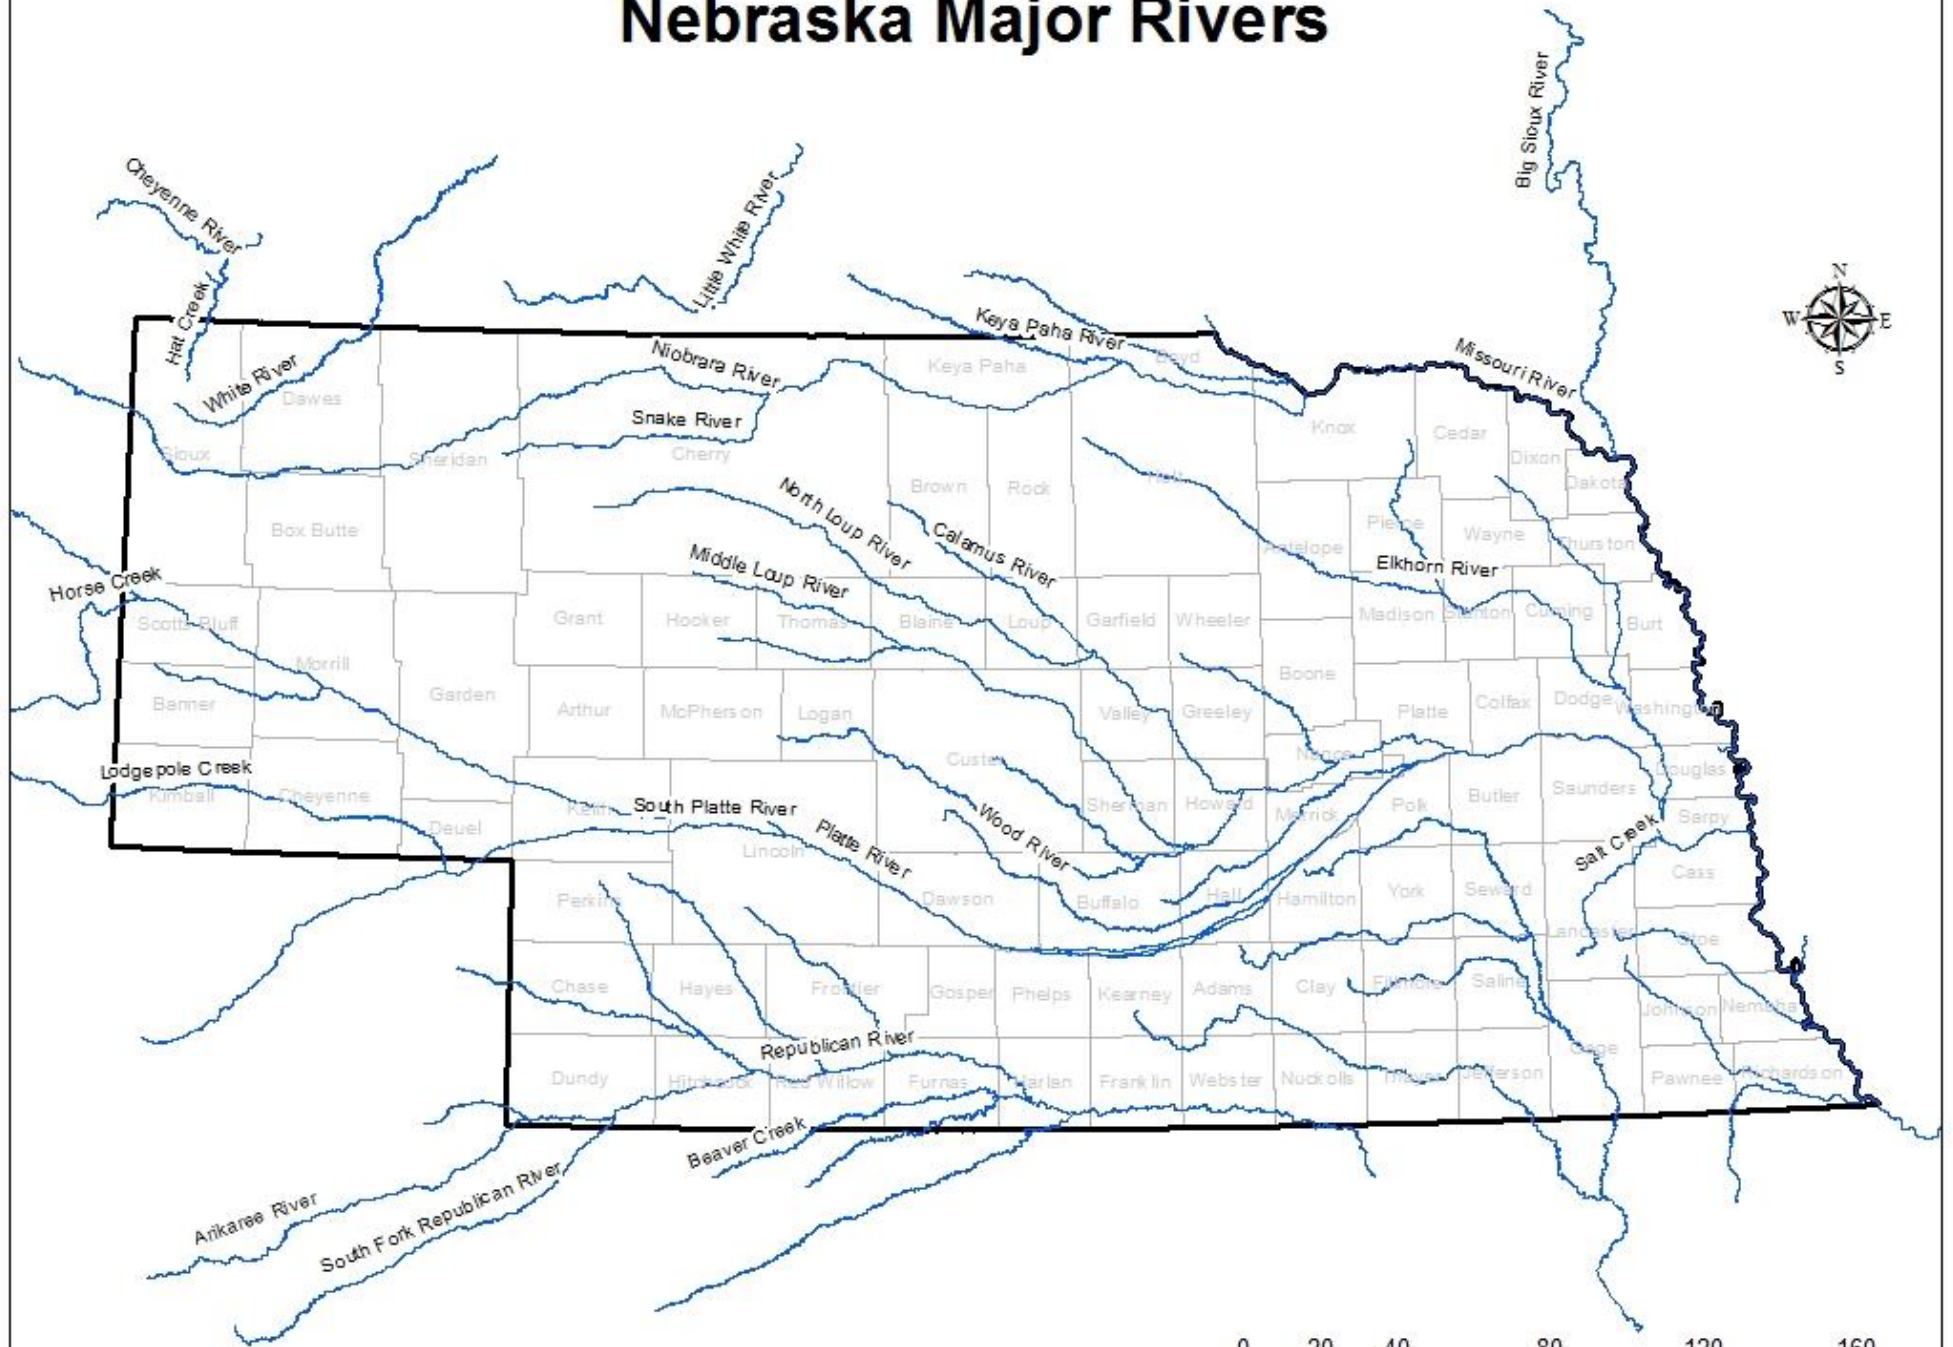

Scroll over names of agencies to find the associated web link.

Nebraska Department of Natural Resources

Finding a balance between competing demands is a key to Nebraska's resource future. Assessing impacts of alternative soil and water management options requires an understanding of complex issues and substantial amounts of reliable data. The Nebraska Department of Natural Resources (NDNR) is committed to providing Nebraska's citizens and leaders with the data and analyses they need to make wise resource decisions for the benefit of all Nebraskans both now and in the future. The NDNR is a State agency with responsibilities in the areas of:¹

301 Centennial Mall South
Lincoln, NE
402-471-2363

Groundwater

- State Law requires that all new wells drilled in the state must be properly registered with NDNR.
- Permits are required to transfer groundwater off overlaying land for large industrial uses, geothermal uses, out-of-state uses and water well spacing requirement violations.
- NDNR is responsible for approving or denying municipal and rural domestic transfer permits.
- NDNR maintains records on all the above.¹

Surface Water

- NDNR has jurisdiction over matters pertaining to surface water rights for storage, irrigation, hydropower, manufacturing, diversions, instream flows and other beneficial uses.
- Anyone wishing to divert the waters of a natural stream or lake must first get a permit or water right from the Department.
- The NDNR is also responsible for the collection of and reporting of flow data for streams, canal and pump diversions and storage data for reservoirs. Published annually, this information can also be found at the agency's homepage site <http://www.dnr.ne.gov>.
- NDNR represents Nebraska's interests on interstate water compacts and decrees.¹

Integrated Water Management

When a river basin or portion of a river basin is determined to be fully appropriated or declared overappropriated, NDNR and the affected nrd(s) must work cooperatively to develop an integrated management plan for that specific area. NDNR provides groundwater modeling and the development of modeling tools for studying surface water/groundwater interactions and impacts of water uses. This

information is used in the preparation of an Annual Evaluation of Availability of Hydrologically Connected Water Supplies Report required by state law.¹

Floodplain Management / Dam Safety

- NDNR is responsible for a non-structural program of floodplain management including the delineation of floodplains and providing technical assistance on floodplain management to local units of government.
- The NDNR is charged with the responsibility for coordination and assistance with the National Flood Insurance Program and the Flood Mitigation Assistance Program.
- The agency reviews and approves engineering plans for new dams, the rehabilitation of old dams and emergency preparedness plans for all dams classified as high hazard. An inventory of these dams and their field inspections are maintained.¹

Planning Assistance

- The NDNR provides technical and policy information to help Nebraskans make sound soil and water resources management decisions.
- Participates in numerous state, inter-state and local studies, development of planning related databases, and guidance of the State Water Planning and Review Process.
- Provides local units of government with requested assistance in natural resources planning and management responsibilities.
- Responsible for the maintenance and update of spatial dataset of surface water features. (National Hydrography Dataset)¹

Nebraska Game and Parks Commission

The Nebraska Game and Parks Commission works to conserve Nebraska's natural resources. They managing Nebraska's state parks, state recreation areas and other public lands; managing the fisheries at numerous public lakes across the state. The Game and Parks also helps provide hunter and boater education as well as issuing permits for hunting, fishing, and the Nebraska's state parks.³

University of Nebraska – Lincoln

Nebraska Water Center

The Nebraska Water Center, established by Congressional mandate as one of 54 Water Resources Research Institutes in 1964, focuses on helping the University of Nebraska become an international leader in water research, teaching, extension and outreach. After 50 years, its fundamental goals have not changed. The Water Center helps arrange research addressing water problems or understanding of water; helps new water researchers; trains future water researchers and engineers; and publishes water research results to water professionals and the public through publications, research colloquiums and conferences, lectures and tours. It is part of the Robert B. Daugherty Water for Food Institute at the University of Nebraska.¹⁰

Nebraska Well Drillers Association

The Nebraska Well Drillers Association has a long tradition in the ground water industry in Nebraska. It was established over seventy-five years ago and nurtured by key industry leaders along with academicians from the University of Nebraska.

The NWDA has served the industry by providing technical training, new product exposure, idea sharing and fellowship among the members. The organization represents businesses and industries as well as technicians dealing with water well drilling, pump installation, manufacturing and the supplying of equipment and material for water well work.

The NWDA has also become a significant voice in legislative and regulatory the State of Nebraska.¹²

Nebraska State Irrigation Association

The NSIA is a thriving, active organization that plays a major role in irrigation matters for the State of Nebraska. First and foremost, the NSIA supports educational conferences, workshops and meetings for members. In addition, the Association works with groups whose interests support irrigation activities in Nebraska. Underlying these activities is an agenda that seeks to further explore the need for effective irrigation project management

A cornerstone of the Association's activities focuses on educating the public to broadening the collective knowledge about water management and related natural resources.¹³
